

Github manual

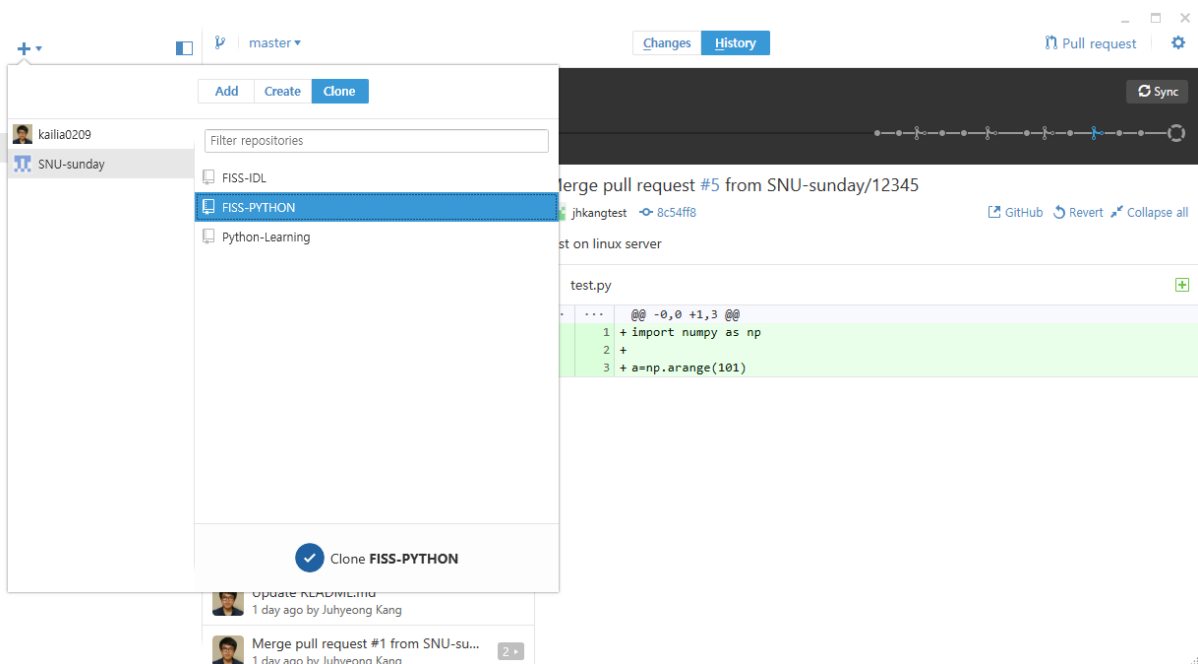

1. For Windows or Mac OS

Download the Github Desktop : <https://desktop.github.com/>

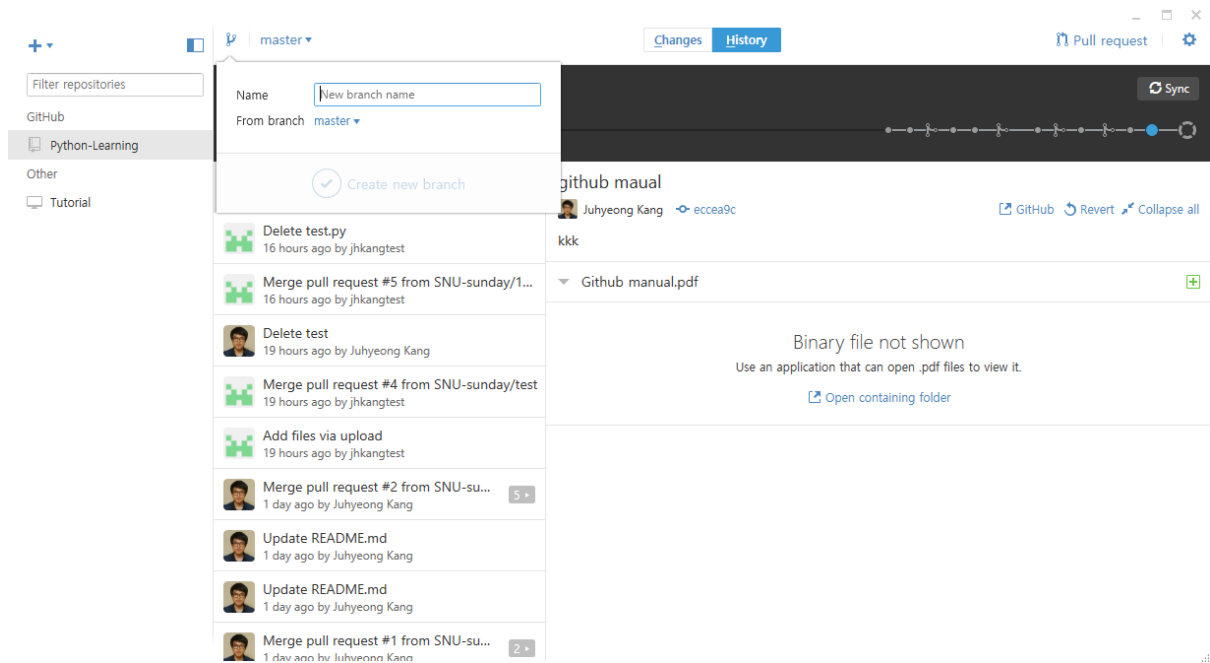

It set the ssh-key automatically.

- 1) Run the GitHub program
- 2) Sign in
- 3) Cloning of a repository

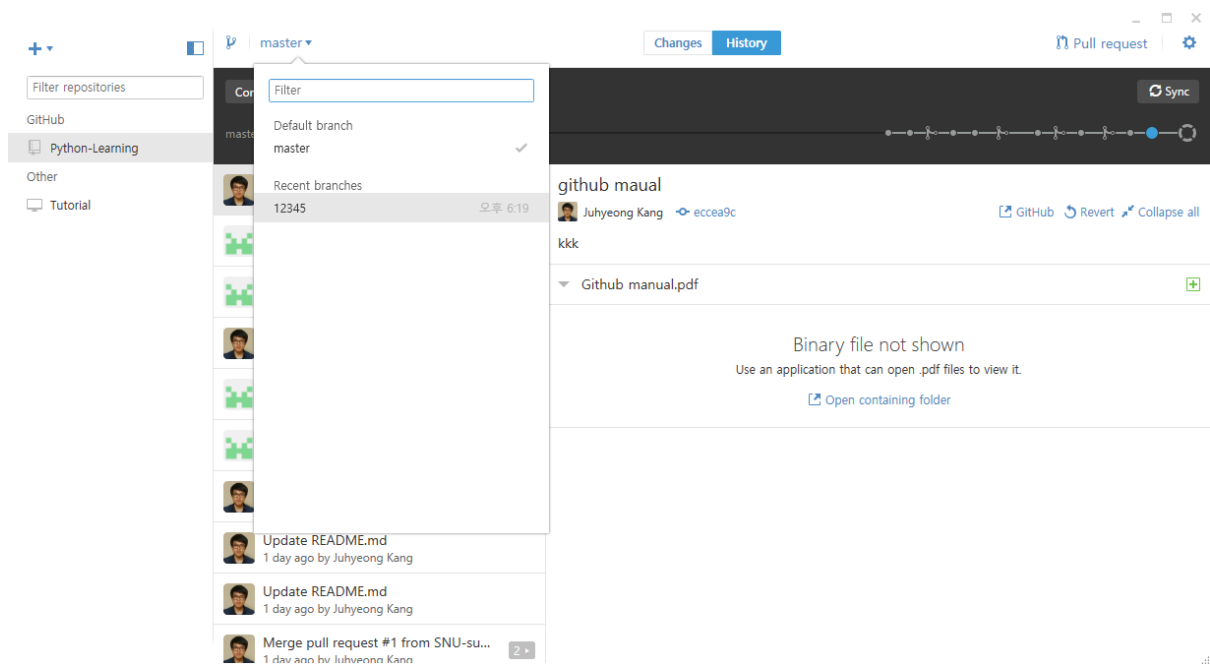

Click the + button on the left side, then click clone tab. Choose a organization and a repository.

4) Create new branch

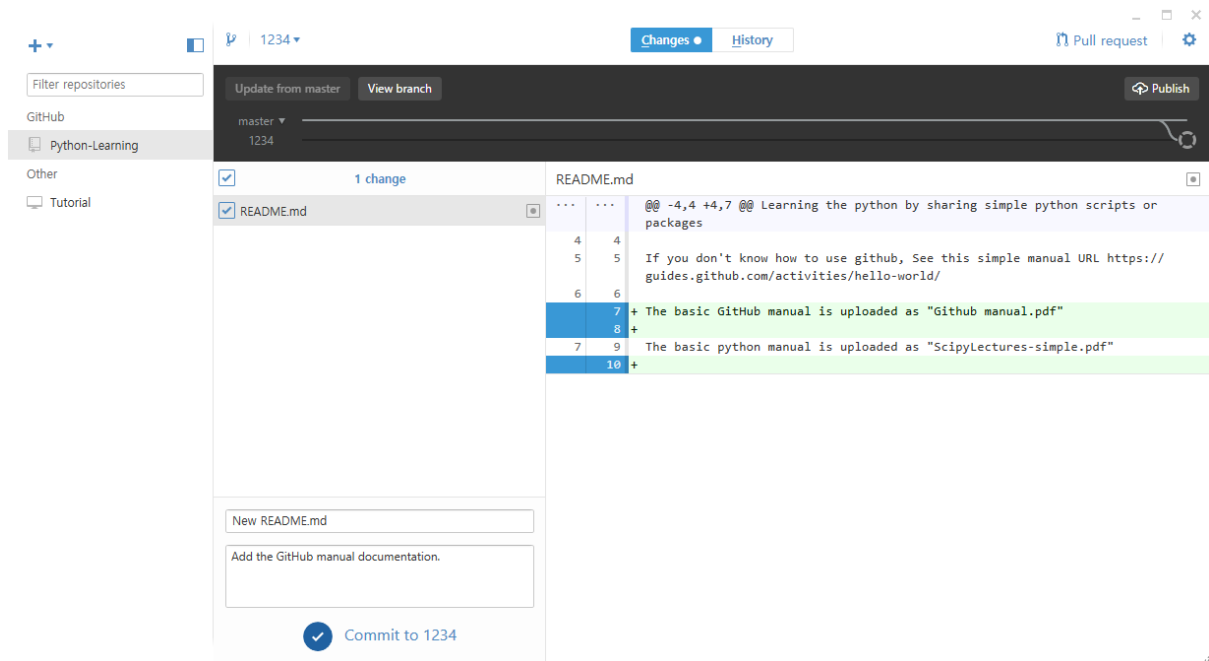

5) Choose the branch

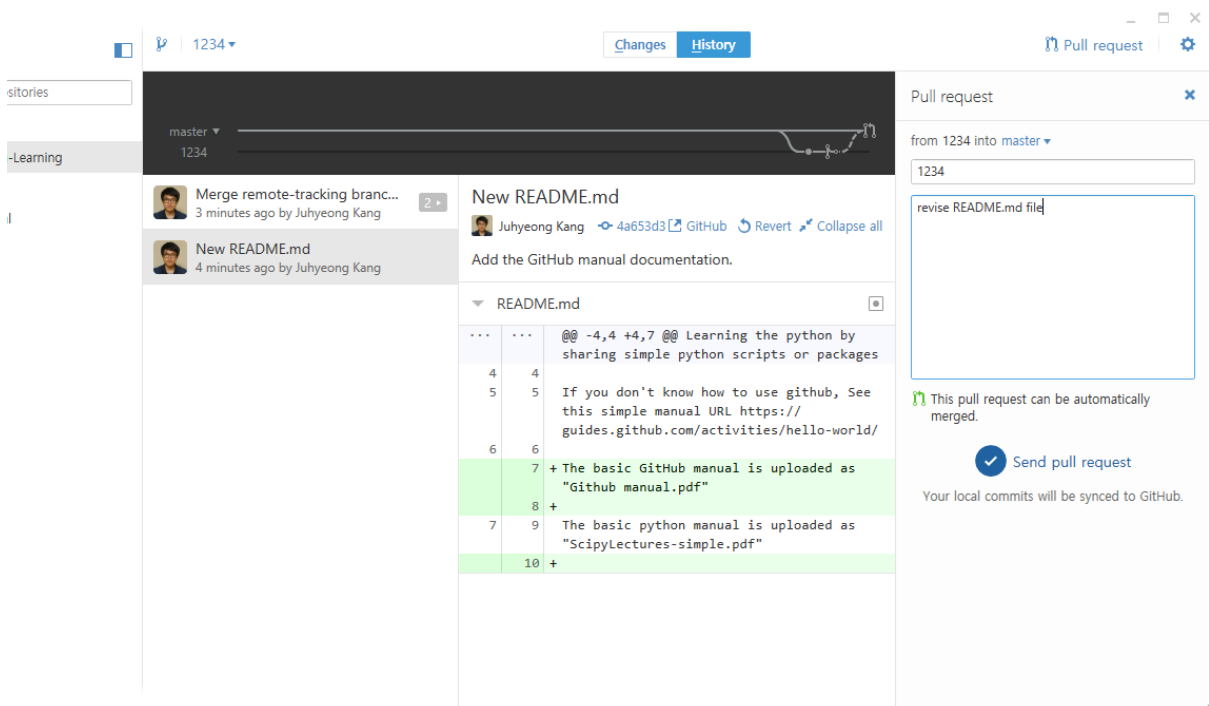

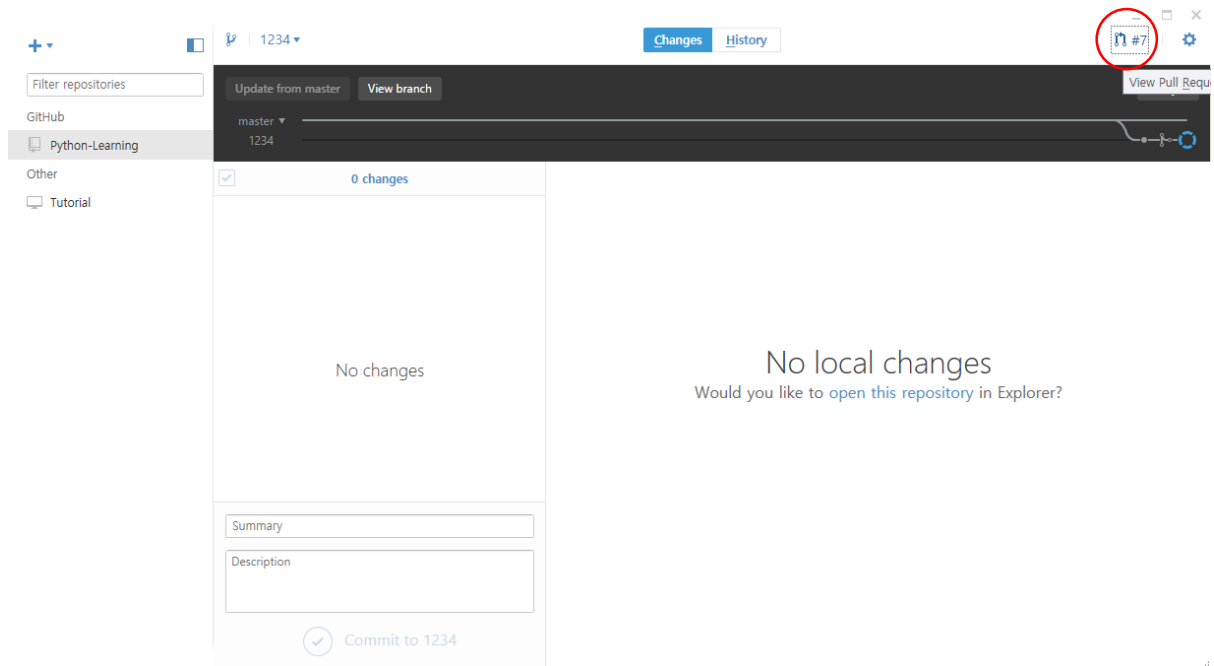

6) Revise your code, then GitHub program automatically check your revision.

7) Commit to your branch and click the publish button on the right side of black panel, then your branch is uploaded to the website.

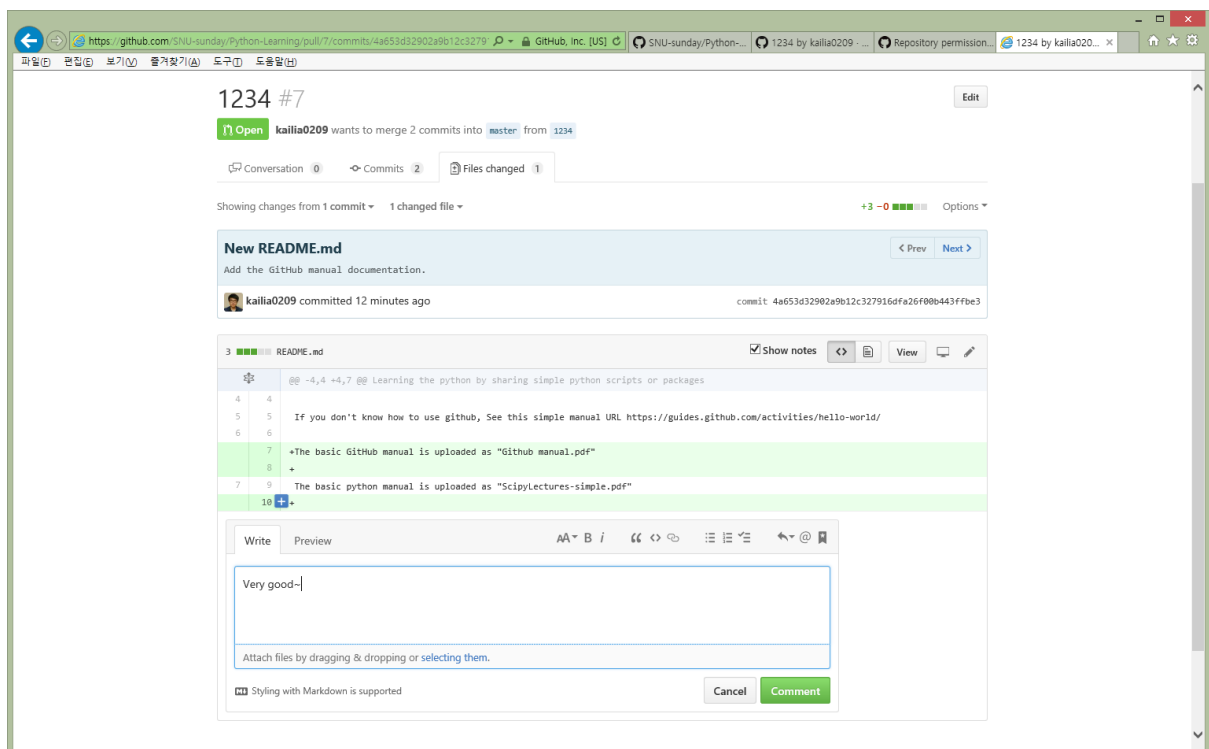

8) After that click the pull request. Then your request can be seen on the website

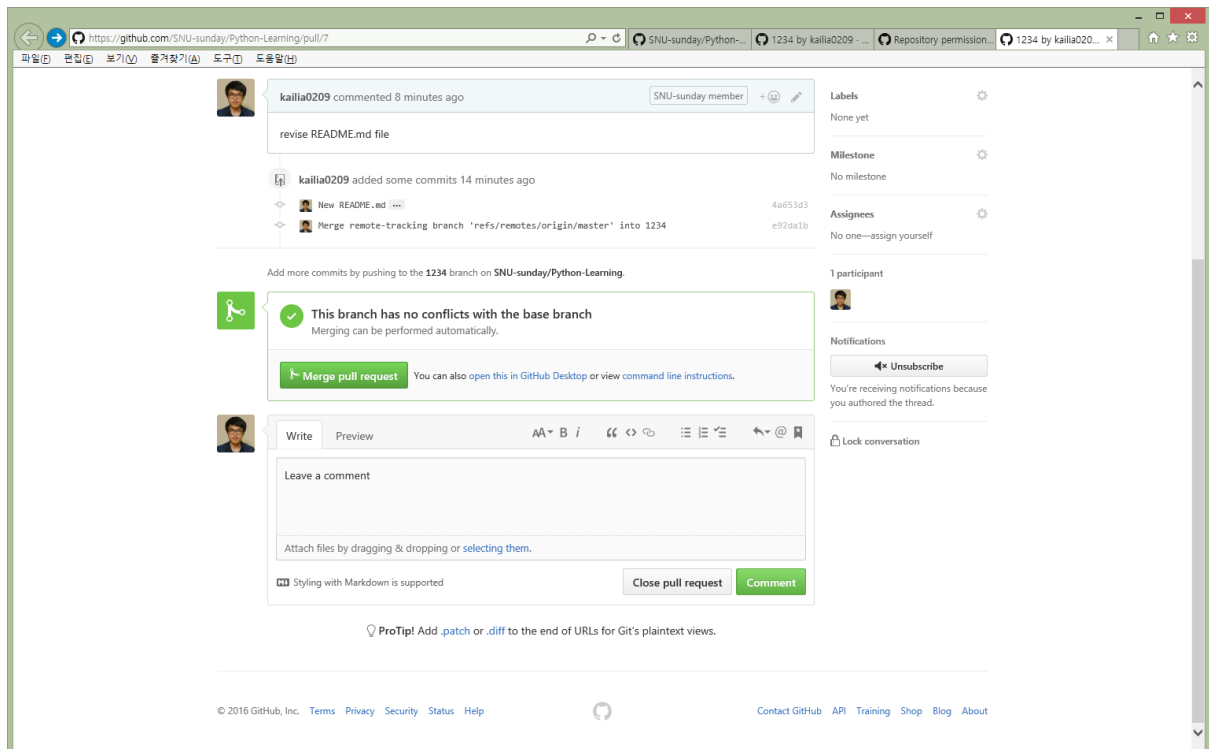

9) Add the comment(댓글) on the 'Conversation' tab or 'Files changed' tab.

10) Change your branch code again until anyone satisfy.

11) Then merge it.

12) Then Delete the branch.

13) If you want to sync your local repository to master branch of github repository, just click the sync button on the right side of black panel of GitHub program.

2. For Linux

There is no Desktop version for github

First you set the ssh-key

1) on the terminal

```
$ ssh-keygen -t rsa -b 4096 -C your-email@abcd.com
```

Enter a file in which to save the key (/Users/abc/.ssh/id_rsa): [press enter]

Enter passphrase () : [type the password]

Enter same passphrase again : [type the password again]

```
$ ssh-add ~/.ssh/id_rsa
```

```
$ cat ~/.ssh/id_rsa.pub
```

And then paste all of the output on your terminal.

2) on the website <https://github.com/>

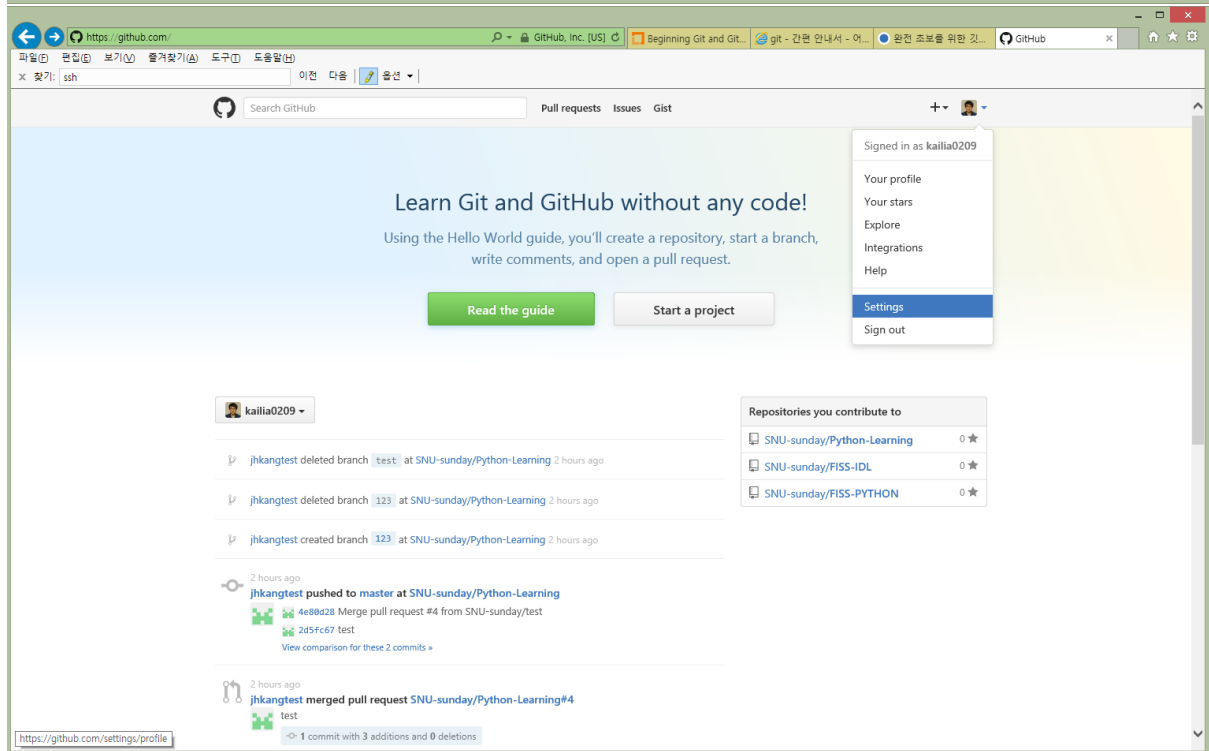

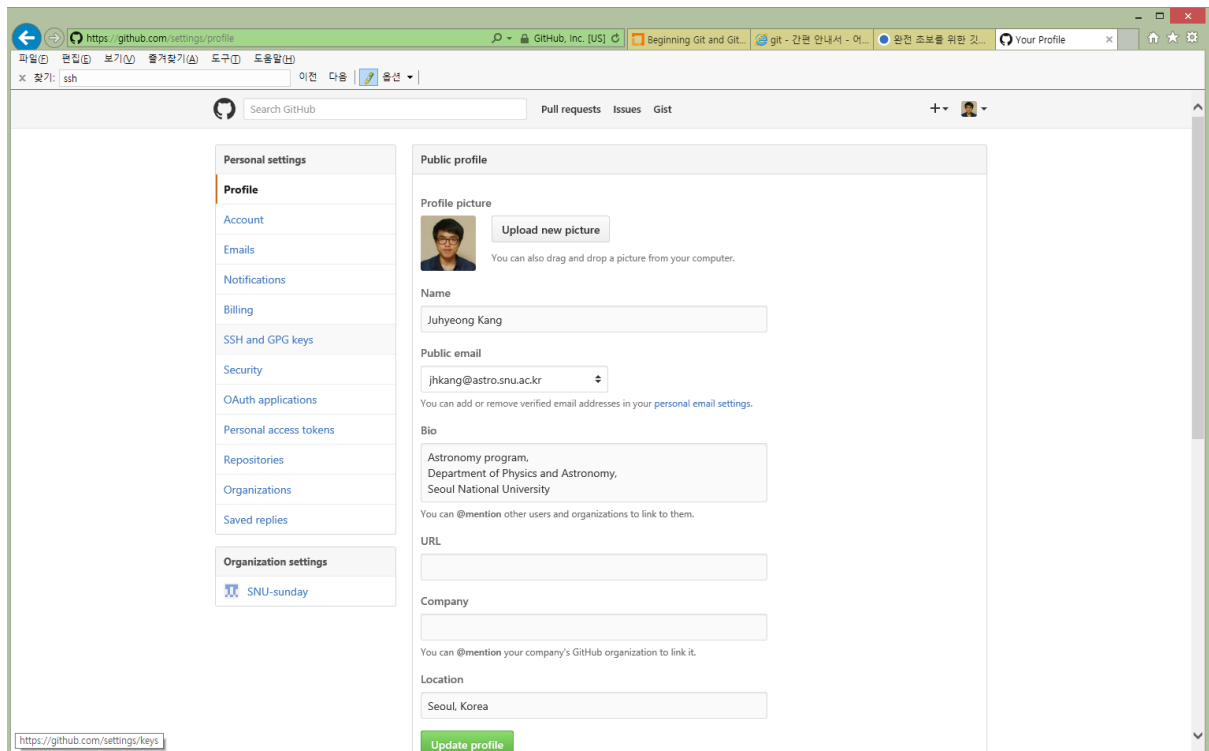

sign in

click 'setting' (see figure)

on the left banner, click 'SSH and GPG keys'

Then click the 'New SSH key'

Type the title you want, and paste the above output on the key then click the Add SSH key

Next you create the clone of any repository and setting

- 1) make private directory for sync from Github repository
- 2) \$ git clone <https://github.com/SNU-sunday/Python-Learning.git>
- 3) move to Python-Learning
- 4) \$ git config --global user.name "your user name"
- 5) \$ git config --global user.email "your account email"
- 6) \$ git remote set-url origin ssh://git@github.com/SNU-sunday/Python-Learning.git
- 7) check \$ git remote -v
- 8) create and change your branch (default is master – I recommend that you always switch any branches)

\$ git checkout -b branch_name (create branch)

\$ git checkout branch_name (switch branch)
- 9) index adding

git add (filename)
- 10) committing

git commit -m "commentary" (up to here is the local process)
- 11) sync to online github branch

git push origin branch_name
- 12) If you want to pull requests you log in to the website and click pull requests
- 13) Sync to the master branch

\$ git pull origin master
